Illustration shows use of 1' x 1' carpet sample tiles

Each "panel" consists of two carpet tiles back to back to provide visual stimulation on both sides of the structured divider

Framing incorporates slits for form fitting and option of no hardware for assembly

Framed structure can be constructed from a variety of materials including wood, recycled plastics, or metal

Dimensions of both carpet sample tiles and framing structure are flexible depending on use and needs

Number of panels in the room dividing structure can also increase or decrease depending on space size

Goal of Design ultimately revolves around flexibility, adaptability, and re-use
